FOR IMMEDIATE RELEASE

Micro-Coax Size 8 Multiport Interconnect System Now Available

Pottstown, PA - August 17, 2007 Micro-Coax, a global leader in high performance coaxial cable and cable assemblies, announces the availability of its Size 8 Multiport Interconnect System for military and defense applications up to 18 GHz.

The Size 8 Multiport Interconnect System features a lightweight, weatherproof design that resists moisture and light rain. This system also employs a Half Turn Fastener to make for a simplified installation process. Uniquely designed, this system is built to accept 18 coaxial cable assemblies terminated with compatible Micro-Coax Size 8 Contacts to meet tight system space requirements.

The Micro-Coax Size 8 Contacts are specially matched to Micro-Coax high performance UTiFLEX[®] coaxial cables. These Contacts offer exceptional electrical performance such as DC to 18 GHz frequency response, VSWR < 1.14:1 to 18 GHz and Corona ≥ 700 Vrms at 70,000 feet. They also feature field replaceable heads that minimize system down time and cost.

John Lewis, Technical Director for Micro-Coax, notes the company's continuing quest for providing innovative solutions to the RF and Microwave industries, "The Multiport Interconnect System combined with our UTiFLEX coaxial cables will offer a new level of performance and flexibility for our customers."

About Micro-Coax:

Micro-Coax is a leading provider of transmission line solutions for radio frequency (RF) and microwave applications. Serving the defense, satellite, telecommunications, test and measurement markets for more than forty years, Micro-Coax has earned a reputation for mission performance and excellent customer service. A broad technology base allows Micro-Coax to quickly respond to customer needs with optimized solutions of coaxial cables, connectors, harness assemblies and conductive fibers.
