FOR IMMEDIATE RELEASE

Micro-Coax participates in a lean manufacturing workshop with local food bank

Pottstown, PA - March 1, 2010: Micro-Coax is proud to have recently participated in a lean manufacturing workshop with local food bank, North Coventry Food Pantry.

Located in the basement of the North Coventry Township building, the North Coventry Food Pantry was established over 20 years ago to assist residents of North, East and South Coventry Townships.

Facing the challenges of operating out of a small space, the Food Pantry needed help in organizing donated materials and streamlining workflow to optimize the use of time.

The event kicked off with a full-day spent focused on organizing the layout of the Pantry. Incorporating the principles of lean manufacturing, Micro-Coax was able to provide the Food Pantry with tools to increase overall efficiency by maximizing the use of space and improving work center organization.

Using the lean manufacturing tools learned during this event, the North Coventry Food Pantry is now better equipped to service even more families than before.

About Micro-Coax:

Micro-Coax is a leading provider of transmission line solutions for radio frequency (RF) and microwave applications. Serving the defense, satellite, telecommunications, test and measurement markets for more than forty years, Micro-Coax has earned a reputation for mission performance and excellent customer service. A broad technology base allows Micro-Coax to quickly respond to customer needs with optimized solutions of coaxial cables, connectors, harness assemblies and conductive fibers.
